

Lufthansa Consulting is currently looking for you to join our consultancy team in Singapore, Cologne or Frankfurt as

Senior Consultant /Consultant for Air Cargo Infrastructure and Logistics (m/f)

In this position you design concepts for processes and procedures including the related infrastructure and systems for airport services with a special focus on air cargo facilities and equipment. You develop facilities for air cargo handling and logistics services, storage and transport systems and equipment. You define planning parameters and standards for logistics systems. Planning, project management including specification, bidding and contracting, installation supervision, start-up, project controlling and engineering supervision of logistic project with highest service standards and in accordance with customer requirements are your tasks. You focus on independently developing client specific consulting services and solutions. Moreover you are responsible for accomplishing project and product development activities autonomously, for the further development and implementation of consulting strategies and for the development of new consulting tools and methods. You manage large projects and are involved in large projects with international teams of consultants and client staff. You carry out project controlling and project assessment and are also involved in projects outside your own field of expertise. Your tasks also include specialized sales development and the identification of market, product and customer potentials. You participate actively in external communication (e.g. at conferences, trade fairs etc.) and prepare presentations, proposals, studies, publications and speeches.

Your Profile:

Degree in mechanical engineering/logistics completed at a university or technical university, or expertise and skills of a similar level acquired through extensive work experience and relevant training

Longstanding experience in planning and implementing of logistics projects as well as material handling systems in the aviation industry

Special capability ability to analyze complex logistics situations and develop success-orientated and client specific solutions

Several years experience in project steering and managing international project teams; pronounced knowledge in product development

High level of autonomous working, well developed cooperation spirit as well as the capability to work in ever changing teams, flexibility, openness for ever changing working conditions and capability to cope with high workloads

Self-possession in own representation, negotiation skills, persuasiveness in client contacts

Ability to present complex issues accurately in written and spoken communication

Confident negotiations skills in English and good knowledge of another foreign language

Excellent computer skills (MS-Office; AUTOCAD, Internet)

High level of own initiative, readiness for further education and know how transfer, interest in knowledge management and experience with innovative problem solutions

Enthusiasm for very intensive business travel activities, capability and openness to work in various foreign cultural environments

If applicable, psychological suitability examination and medical
